                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                04-JUN-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               05-JUN-1
                                                                ACA64409
                                                                                                         The present invention relates to the isolation of novel human PRO polypeptides are secreted and transmembrane proteins. The PRO polypeptides are secreted and transmembrane proteins. The PRO polypeptides and polynucleotides are useful for preparing a medicament useful in the treatment of diabetes, bone and/or cartilage disorders (e.g. rheumatoid arthritis, sports injuries, osteoarthritis), obesity, hyper- or hypo-insulinaemia, hearing loss, and coagulation disorders (e.g. stroke, heart attack). Anti-PRO antibodies are useful in diagnostic assays for PRO, by detecting its expression in specific cells, tissues or serum, and for affinity purification of PRO from recombinant cell culture or natural sources. ACA66994-AA67268 represent cDNA sequences encoding the human PRO polypeptides of the invention. Note: The sequence data for this patent was obtained in electronic format directly from the USPTO web
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    211
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 271
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        151

New genes and secreted and transmembrane polypeptides (e.g. PRO183 or PRO184), useful for treating or diagnosing e.g. ovarian cancer, Kaposi's sarcoma, leukemia, lymphoma, hepatitis B, multiple sclerosis or Crohn's disease

Claim 1; Fig 271; 663pp; English.

The invention describes a new isolated nucleic acid molecule comprising the full length coding sequence of the DNA deposited with the American Type Culture Collection (e.g. ATCC Deposit No. 209621, 522-pTA, 819-PTA, 209439, 203135, etc); or a sequence with a least 80% identity to a DNA encoding a PRO polypeptide. The PRO polypeptides or polymoclectides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. These

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         211
are particularly useful for detecting or treating e.g. malignancies or cancers (e.g. ovarian cancer, colorectal cancer, Kaposi's sarcoma, leukaemia or lymphoma), hepatitis B, multiple solateosis, or Crohn's disease in mammals. The PRO polypeptides are useful in drug screening, particularly as targets for therapeutic intervention in these diseases, and in the diagnostic determination of the presence of these diseases. The PRO polypeptides are also useful as molecular weight markers, or for chromosome identification. The PRO genes are useful as hybridisation probes, or for screening libraries of human cDNA, genomic DNA or mRNA. The PRO genes may also be used in gene therapy, particularly for replacing a defective gene. This sequence encodes a novel human secreted and transmembrane PRO polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                          40

The present invention relates to the isolation of novel human PRO polypeptides and the polynucleotide sequences encoding them. The PRO polypeptides are secreted and transmembrane proteins. The PRO polypeptides are useful for detecting other PRO polypeptides, for linking polypeptides are useful for detecting other PRO polypeptides, for linking biological activities of cells expressing PRO polypeptides, and for for identifying agonists or antagonists. The PRO polypeptides are useful for for stimulating the release of tumour necrosis factor (TMF)-alpha from theman blood, for stimulating the proliferation or differentiation of chondrocytes, and detecting the proliferation or differentiation of sequences encoding PRO polypeptides are useful as hybridisation probes, in chromosome and gene mapping, in the generation of antisense RNA and CDNA, in the preparation of PRO polypeptides, for generating transpenic animals or knockout animals, for the genetic analysis of individuals with generating the human PRO polypeptides of the invention. Note: The sequence conding the human PRO polypeptides of the invention. Note: The sequence data for this patent was obtained in electronic format directly from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New secreted and transmembrane PRO nucleic acids, useful for gene therapy, in chromosome and gene mapping, as chromosome markers, in tissue typing, and in chromosome identification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gao
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Baker KP, Beresini M, Deforge L, Desnoyers L, Filvaroff E, Gr

Two hundred and seventy five nucleic acids encoding PRO polypeptides, useful for treating pericyte-associated tumors, diabetes and various bone and/or cartilage disorders, e.g. arthritis.

Claim 2; Fig 473; 659pp; English

The invention describes an isolated human PRO polypeptide. The PRO polypeptides are useful in detecting PRO polypeptides in a sample, in inking a bioactive molecule to a cell expressing a PRO polypeptide, and in modulating at least one biological activity of a cell expressing a PRO polypeptide. PRO1312 stimulates hypertrophy of neonatal heart and is thus polypeptide. PRO1312 stimulates hypertrophy of neonatal heart and is thus tusful for treating cardiac insufficiency discoders. PRO156, PRO186 stimulate adrenal cortical capillary endothelial growth, and PRO536, PRO343, PRO826, PRO168 or PRO535, PRO819, PRO1367, induce c-fos in endothelial cells, and are thus useful for treating conditions or disorders where angiogenesis would be beneficial, e-g. wound healing and antagonist of this polypeptide are useful for treating concerous tumours. PRO812 inhibits vascular endothelial growth factor (VEGP) stimulated proliferation of endothelial cells and is thus useful for inhibiting endothelial cell growth in mammals which would be beneficial in inhibiting tumour growth. PRO826, PRO1068, PRO1184, PRO1346 and PRO1375 stimulate proliferation of stimulated T-lymphocytes and are therapeutically useful for enhancing immune response. PRO826, PRO1068, PRO1088, PRO826, PRO1068, PRO1132 is also enhances survival/proliferation of retinal neurons cells and therefore are useful for trating retinal disorders of injuries, e.g. retinitis pigmentosum, AMD. PRO813, and therefore are useful for treating kidney disorders associated with decreased mesangial cells, and therefore are useful for treating kidney disorders associated with decreased mesangial cell function such as Berger disease or other nephropathies associated with dermatitis, herpetiformis or Crohn's disease. PRO1310, PRO844, PRO1312, PRO1192 and PRO1387 induce the proliferation and/or redifferentiation of chondrocytes in culture and are encodes a novel human PRO protein

SEQUENCING READ COVERAGE:Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               /note="Variable size of homopolymeric repeat in subclones"
/function="unresolved homopolymeric run"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.
Genes and Region of sequence similarity are identified by BLAST (Muc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the Features listing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          STSs are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and
Worley, K.C.

NOTE: This is a 'working draft' sequence. It currently consists of 16 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

A novel cluster of lectin-like receptor genes expressed in
monocytic, dendritic and endothelial cells maps close to the NK
receptor genes in the human NK gene complex

"The complete genome sequence of the avian pathogen Mycoplasma gallisepticum strain R(low).";
Microbiology 149:2307-2316[2203)
-i- FUNCTION: With S4 and S12 plays an important role in translational accuracy (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              and S8 (By similarity).

DOMAIN: The N-terminal domain interacts with the head of the 30S subunit; the C-terminal domain interacts with the body and contacts protein S4. The interaction surface between S4 and S5 is involved in control of translational fidelity.

SIMILARITY: Contains 1 S5 DRBM domain.
SIMILARITY: Belongs to the S5P family of ribosomal proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     FUNCTION: Located at the back of the 30S subunit body where it stabilizes the conformation of the head with respect to the body
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SUBUNIT: Part of the 30S ribosomal subunit. Contacts proteins S4

-I. FUNCTION: E2 REGULATES VIRAL TRANSCRIPTION AND DNA REPLICATION.
-I. FUNCTION: E2 REGULATES VIRAL TRANSCRIPTION AND DNA REPLICATION.
-I. FUNCTION: E2 REGULATES VIRAL TRANSCRIPTION AND DNA REPLICATION.
-I. FUNCTION: COPIES IN THE REGULATORY REGION. IT CAN EITHER ACTIVATE OR REPRESS TRANSCRIPTION DEPRINDING OF E22R'S POSTITION WITH REGARDS TO PROXIMAL PROMOTER ELEMENTS. REPRESSION OCCURS BY STERICALLY HINDERING THE ASSEMBLY OF THE TRANSCRIPTION INTITATION COMPLEX. THE E1-E2 COMPLEX BINDS TO THE ORIGIN OF DNA

"The chloroplast and mitochondrial genome sequences of the charophyte Chaetosphaeridium globosum: insights into the timing of the events that restructured organelle DNAs within the green algal lineage that led to land plants.",
Proc. Natl. Acad. Sci. U.S.A. 99:11275-11280(2002).
-! SUBUNIT: Part of the 30S ribosomal subunit.
-! SUBUNIT: Part of the 30S ribosomal subunit.
-! SUBCELLUAR LOCATION: Chloroplast.
-! SIMILARITY: Belongs to the S3P family of ribosomal proteins.
-! SIMILARITY: Contains 1 KH type-2 domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               -KENHSQPTQSSLEDSVTPTKAVK

Activity is lost when heated at 52 degrees Celsius for five minutes. SIMILARITY: Belongs to family 59 of glycosyl hydrolases. DATABASE: NAME=Genebis; NOTE=Krabbe disease; www="http://life2.tau.ac.il/Genebis/Tables/krabbe/krabbe.html".
                                                                                                                                                                                                          Isold=P54803-2; Sequence=VSP_001800, VSP_001801;
TISSUE SPECIFICITY: Highest level of activity in testes compared
to brain, kidney, placenta and liver. Can also be found in urine-
POLYMORPHISM: Polymorphic amino-acid changes are responsible for
the wide range of catalytic activities found in the general
                                                     galactosylceramide, galactosylsphingosine, lactosylceramide, and monogalactosyldiglyceride. Enzyme with very low activity responsible for the lysosomal catabolism of galactosylceramide, amajor lipid in myelin, kidney and epithelial cells of small intestine and colon. CATALYTIC ACTIVITY: D-galactosyl-N-acylsphingosine + H(2)O = D-galactoses + N-acylsphingosine.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                MEDLINE-21264235; PubMed-11371343; Meckuller K., Poupart M.-A., Nasmyth K.; Phosphorylation of the cohesin subunit Scc1 by Polo/Cdc5 Kinase regulates sister chromatid separation in yeast."; Cell 105:459-472(2001).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              -I- FUNCTION: Protein kinase required for the cell cycle.
Phosphorylates SCC1/MCD1.
-I- CATALYTIC ACTIVITY ATP + a protein = ADP + a phosphoprotein.
-I- SIMILARITY: Belongs to the Ser/Thr family of protein kinases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Saccharomyces cerevisiae (Baker's yeast).

Biochim. Biophys. Acta 1388:279-283(1998).
-!- FUNCTION: Possesses a potent antimicrobial activity against Grampositive and Gram-negative bacteria. Probably acts by disturbing membrane functions with its amphipathic structure (By similarity).
-!- SUBCELLULAR LOCATION: Secreted.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 SSLEDSVTPTKA-------VKTTGKGI-VKGRNLD-SRGLILGAEAWGRG

Cretidine 5'-phosphate decarboxylase (EC 4.1.1.23) (OMP decarboxylase)
(OMPDCase) (OMPdecase) (Uridine 5'-monophosphate synthase) (UMP
SIMILARITY: Belongs to the frog skin active peptide (FSAP) family. Dermaseptin subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1 MIFFLSLLLLLLVCEAIWRSNSGSNTLENGYFLSRNKENHSQPTGSSLEDSVTPTKAVKTT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Clark-Walker G.D.;
Submitted (FBB-1998) to the EMBL/GenBank/DDBJ databases.
--- CATALYTIC ACTIVITY: Orotidine 5'-phosphate = UNP + CO(2).
--- PATHWAY: Pyrimidine biosynthesis; sixth (last) step.
--- SIMILARITY: Belongs to the OMP decarboxylase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Score 63; DB 1; Length 80;

IT BINDS TO THE SEQUENCE CTA(T/A) ATAR.

-1 SUBCELLULAR LOCATION: Nuclear.

-1 TISSUE SPECIFICITY: RESTRICTED TO THE SOMITIC MESODERM OF EARLY EMBRYOS AND TO THE BODY MUSCLE (MYOTOMES) OF THE TADFOLE.

EXPRESSED IN ALL TISSUES EXAMINED IN THE ADULT.

-1 DEVELOPMENTAL STAGES EXAMINED IN THE ADULT.

-1 SIMILARITY: Belongs to the MEP2 family.

-1 SIMILARITY: Contains 1 MADS-box domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              MEDLINE-93099873, PubMed=1281451;

"Proteomics analysis reveals stable multiprotein complexes in both fission and budding yeasts containing Myb-related Cdc5p/Ceflp, novel pre-mRNA splicing factors, and snRNAs."; Mol. Cell. Biol. 22:2011-2034 (2002).
-: FUNCTION: Involved in mRNA splicing where it associates with cdc5 and the other cwf proteins as part of the spliceosome.
-: SUBUNIT: Interacts with cdc5.
-: SUBCELULAR LOCATION: Nuclear (Probable).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        SNSGSNTLENGYFLSRNKENHSQPTQSSLEDSVTPTKAVKTTGKGIVKGRNLDSRG 74
